Mission

Minerra Tech streamlines bulk ASIC miner acquisition by connecting verified suppliers, brokers, and professional buyers through a single platform. Our mission is to make large scale sourcing reliable, transparent, and efficient.

Problem

Broker networks across Telegram and private groups are fragmented and unverified, leaving many buyers exposed to inconsistent pricing and risk.

Solution

Minerra Tech aggregates live batches from trusted US and Canadian suppliers, verifies availability, and publishes them on an open marketplace. Buyers gain a clear view of real inventory, direct payment coordination, and managed shipment support.

Key Advantages

- Real time batch listings from verified sources.
- Transparent pricing and direct communication channels.
- Secure payment and shipping coordination for each deal.

Vision

Minerra Tech aims to become North America's leading B2B hub for ASIC distribution, bridging the gap between suppliers and buyers while strengthening Bitcoin's global mining infrastructure.
